BigTree 4x: What's New?

This document covers changes to BigTree 4.

Navigation and Template tabs have been combined into "Properties" button

Resources

The "Upload New" Resources section is no longer on the left. Now to upload and link to a *Resource*, use the **Insert Link**, **Insert Image**, and **Insert Media** buttons.

The results only display the latest 200 items. The search function, however, will display all items searched.

Resources still require an administrator to delete. We'll have a form linked from the Webteam website soon to request removals.

File Folders

Publishers will now see their resources in folders. We have set each account to a specific starting folder. Other folders can be created, but keep them in the starting folder. Publishers can notify us if they feel their starting folder is incorrect.

Linking to BigTree pages

Publishers can use the **Link Finder** box above the Page Header box to search for a BigTree page, and then drag the link into the Editor. From there, renaming the link title is the same as in BigTree 3x.

Sidelets

The "Sidelets" section is no longer on the left. It can now be found toward the bottom of the Edit Page section. To add a Sidelet, click the "Add Callout" button and choose a Sidelet. Editing Sidelets is easier than ever and can be found in the same section.

Add New Page to 'xxx' is now Add Subpage

The wording "Add New Page to 'xxx' has been changed to **Add Subpage**. Add Subpage essentially means add a new page in the currently selected page directory/bucket.

Page Changes

- Choosing a Template is now done from a drop-down menu on the **Properties** tab under "**Template**."
- The **URL Route** field has moved from the Navigation tab to the **SEO** tab.
- Each page now has a "**Revisions**" tab. This tab allows Publishers to view recent page revisions, restore them desired, and even save revisions if they need to for some reason. Revisions not manually saved are kept for a month (or the last 10 changes).

Other Changes

- Edit Content via Bar on the public site – pops up a modal box allowing Publishers to modify content without leaving the page
- Edit in BigTree via Bar on the public site – redirects to the BigTree Admin Edit Screen. This screen does not open a new tab like v3.3, however when Publishers click Save & Publish, they'll be redirected back to the public page rather than remain in the BigTree Admin.
