

## Getting Started with Moodle

Moodle works best with Mozilla Firefox. You can download Firefox at: <http://www.getfirefox.com>.

1. Open Firefox and go to <http://moodle.depauw.edu/>
2. Login using your Novell username and password.
3. Notice the My Courses block to the left, click on your course. If you do not see your course after logging in, check with your professor to make sure they have a Moodle course and it is available.

4. Now you are in the course. Each course may vary in appearance depending on how your professor has designed it.
5. Topics often reside in the center of the page, where you can find the main content of the course. Click  to show the selected topic only, or click  to show all topics.
6. The top right corner and the bottom of the page both show your user name. If you click on the user name, you will see your own profile where you can enter information about yourself. If you click on “Logout” you will exit both the course and the site.
7. A more detailed guide is located at <http://moodle.depauw.edu/course/view.php?id=2622username=guest>. For more help with using moodle, please contact [start@depauw.edu](mailto:start@depauw.edu).
