

# Science Majors

Have you  
thought  
about  
teaching?

## America's classrooms need you

The **Indiana University Bloomington College of Arts and Science** and the **School of Education** have received funding under the Robert Noyce Teacher Scholarship Program of the National Science Foundation. The funding will allow qualified science students and professionals to pursue initial licensure to teach science at the middle and secondary levels with financial assistance from the program. Program support has been recently increased to \$7,500 per semester for 3–4 semesters depending on which licensure program the applicant has applied. Program participants will be required to teach either two or three years in a “high needs school district” after they complete their licensure program to fulfill the terms of the scholarship.

## Who's eligible

Two pathways are open for initial teacher licensure and possible support by a Noyce Scholarship.

1. Students who have completed a B.A. or B.S. in Biology, Chemistry, Geology, Physics, or Environmental Science (or closely related majors) at any accredited undergraduate school may apply to the Secondary Transition to Teaching (ST2T) <http://education.indiana.edu/st2t> or the Community of Teachers (COT) programs <http://education.indiana.edu/cot>. Admitted students would be eligible to apply for Noyce Scholarship support.
2. Professionals in science and engineering fields that hold undergraduate degrees in their discipline are also eligible to apply to the ST2T or COT programs and be considered for Noyce Scholarship Support.
